

Assignment –2 Introducing Relational Databases.

1) Which field of the Customers table is the primary key?

The field which hold unique identities in each record in a table is called primary kye.

In Customers table Cnum is the primary key.

2) What is the 4th column of the Customers table?

Rating int(4)

3) What is another word for row? For column?

for row - record, tuple, entity and opportunity

for column - field, attribute, keys and method.

4) Why isn't it possible to see the first five rows of a table?

In RDBMS, rows of a table are scattered all over the DB server HD to speed up the insertion statement. When you insert a row into a table it finds the free space in the DB server HD, it will store the row there. When you select from a table, the order of rows in the output depends on the row address.
